DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 27-50, drawn to an electrochemical device, system, or the parts that comprise it, classified in class 429, subclass 12.
- II. Claims 51-60, drawn to a method for delivering material to the electrochemical cell of Group I, classified in class 429, subclass 14.
- III. Claims 61-70, drawn to a method for delivering material to the electrochemical cell of Group I further containing a catalytic reaction step, classified in class 429, subclass 14.
- IV. Claims 19-26, 71, and 72, drawn to a device with means for delivering quantities of at least two materials to an electrochemical cell, classified in class 137, subclass 255.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case Inventions II and III are two different methods of using the same product, Invention I.

Application/Control Number: 10/617,547 Page 3

Art Unit: 1745

3. Inventions I and IV are directed to related devices for electrochemical reactions. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the means of Invention IV are not clearly defined, and therefore could be materially different from the means of Invention I.

- 4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
- 5. Claim 51 of Group II contains the following disclosed patentably distinct species: a method of determining the quantity of fluid to be ejected based on at least one of a) the consumption demands of the cell, b) the composition of the primary material, c) the composition of the additional material introduced into the electrochemical cell, d) the quantity of additional material introduced into the cell contemporaneous with the ejection of the material. The species are independent or distinct because they relate to different measurements. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even if this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added.
- 6. Group IV contains claims, 19 and 71, directed to patentably distinct species.

Application/Control Number: 10/617,547

Art Unit: 1745

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

7. A telephone call was made to Timothy Myers 541-715-4197 on April 20, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 1745

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alix Elizabeth Echelmeyer whose telephone number is 571-272-1101. The examiner can normally be reached on Mon-Fri 7-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
